04 **Gain Energy / Upstrima**
Energy technology / AI SaaS

05 **GoWabi**
Marketplace / Booking / Ecommerce

06 **Daniela Diamonds**
Shopify / Luxury ecommerce

REVIEW NOTE Team scope and unverified technologies remain clearly marked for confirmation.

01 / PROJECT PROFILE

Born To Rock

Mobile gaming / Music

View live app

A mobile rhythm game that turns rock music into an interactive performance. Players tap notes in time, build combos, unlock tour stages and compete on leaderboards. The experience combines a growing music library, career progression and optional premium membership.

KEY FEATURES

- Rhythm gameplay with note timing, combo scoring and Star Power.
- Tour progression through venues, levels and stage rewards.
- A multi-genre rock catalog with selectable difficulty.
- Leaderboards, friend competition and Apple Game Center support.
- Gameplay boosters and optional VIP in-app subscriptions.

TECHNOLOGY EVIDENCE

CONFIRMED PLATFORM

iOS / iPadOS distribution; Apple Game Center; Apple in-app purchases.

POLICY-LISTED SERVICES

RevenueCat, Supabase, Firebase, AdMob, AppLovin and OneSignal appear in the publisher's current-or-planned partner list. Active use of each needs confirmation.

UNVERIFIED

Game engine, client language, rendering framework and AI music provider. Do not label this Unity, C#, Flutter or native Swift without project evidence.

TEAM CONTRIBUTION / TO CONFIRM

Our team contributed [specific modules] to Born To Rock. We implemented [gameplay, UI, integrations or other confirmed work] using [actual technologies], and handled [testing, release or maintenance responsibilities].

Fill-in wording only. Replace brackets with the work your team actually performed.

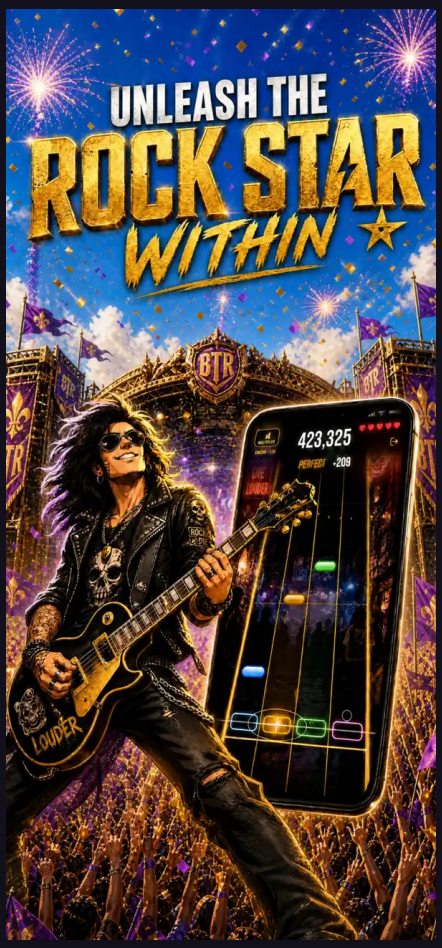

Sources: App Store listing Publisher privacy policy

Scope review: Identify your work on note timing/scoring, progression, game UI, audio, ads, purchases, backend or release support; specify whether this was a full build or a contribution.

02 / PROJECT PROFILE

MedaStaré

Mobile app / AI / Fashion

View live app

An AI fashion and lifestyle app that brings personalized styling, wardrobe organization and creator discovery into one experience. Users can catalog their clothing, explore generated looks, ask for style advice and discover short-form fashion content.

KEY FEATURES

- MedAI styling assistance through text and voice.
- Closeté digital wardrobe, outfit organization and weather-aware ideas.
- FashionStaré AI try-on and generated visual looks.
- StarDay creator videos, following and saved content.
- MedArena style challenges and membership-based access.

TECHNOLOGY EVIDENCE

PUBLISHER-DISCLOSED INFRASTRUCTURE

Firebase Authentication, Firestore, Firebase Cloud Storage and Vercel hosting/runtime.

PUBLISHER-DISCLOSED INTEGRATIONS

OpenAI, Google Gemini, Kling AI and Meshy; Stripe Connect for creator payouts; Apple StoreKit for iOS subscriptions.

UNVERIFIED

Mobile client framework and language. Firebase or Vercel does not establish Flutter, React Native, Swift or Next.js for the app.

TEAM CONTRIBUTION / TO CONFIRM

Our team delivered [confirmed app screens, backend services or AI integrations] for MedaStaré. We developed [specific wardrobe, styling or creator features] with [actual technologies] and supported [confirmed QA and launch scope].

Fill-in wording only. Replace brackets with the work your team actually performed.

Sources: App Store listing Publisher subprocessors

Scope review: Specify the mobile framework and your responsibility for MedAI, wardrobe storage, try-on, social features, subscriptions and creator payouts. Identify which providers you integrated.

03 / PROJECT PROFILE

ScaleUp Systems

AI SaaS / CRM / Automation

Visit live website

An AI-assisted sales platform for creators, coaches and agencies. It connects inbound Instagram conversations with lead qualification, contact management and call booking, helping teams organize their pipeline and take over conversations when human input is needed.

KEY FEATURES

- Automated inbound Instagram replies and lead qualification.
- Shared inbox, contacts and organized sales pipeline.
- Appointment booking and Google Calendar integration.
- Team handoff, review queues and conversation oversight.
- Reporting and tiered plans for individual creators and agencies.

TECHNOLOGY EVIDENCE

OBSERVED ON PUBLIC WEBSITE

Next.js / React marketing frontend: the page loads Next.js app and static chunk assets. This does not prove the authenticated app uses the same stack.

PUBLISHER-DISCLOSED SERVICES

Meta Instagram Messaging / Graph API and webhooks; Google Calendar API; Hetzner hosting; Cortecs AI gateway with Anthropic and OpenAI; Paddle for new subscriptions.

UNVERIFIED

Application language, database engine, queues, frontend styling library and internal SaaS architecture.

TEAM CONTRIBUTION / TO CONFIRM

Our team developed [confirmed website and/or SaaS components] for ScaleUp Systems. Our scope included [specific conversation, CRM, scheduling or reporting modules] and [named integrations], built with [actual stack].

Fill-in wording only. Replace brackets with the work your team actually performed.

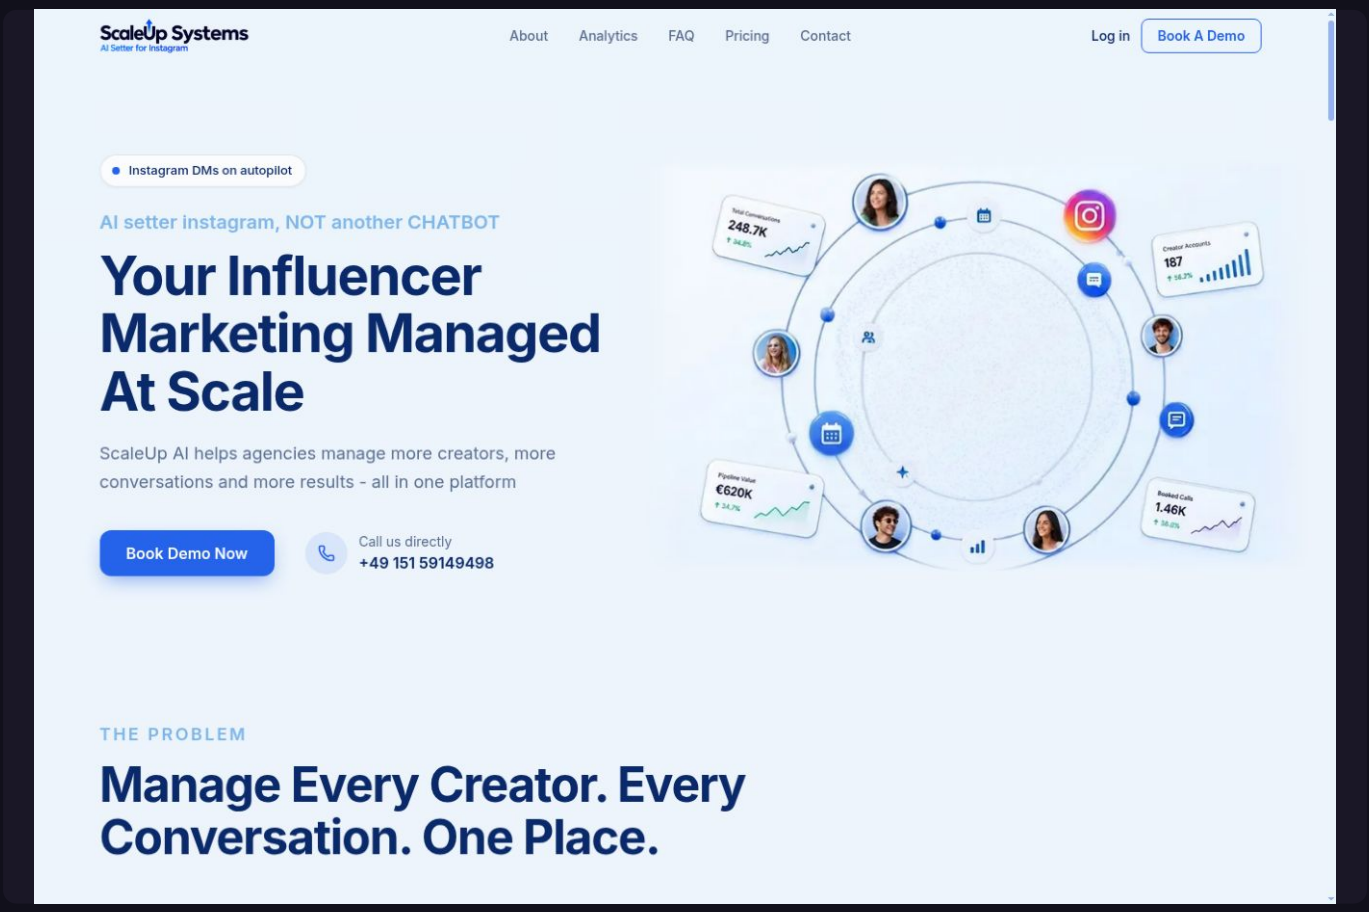

Sources: Product website · Pricing and billing · Privacy and integrations

Scope review: Distinguish the public marketing website from the authenticated SaaS. Confirm your work on Meta webhooks, AI orchestration, CRM, scheduling, analytics, billing and deployment.

03 Subscription plan comparison

Public website captures. Feature illustrations are not independently tested product screens.

04 / PROJECT PROFILE

Gain Energy / Upstrima

Energy technology / AI SaaS

Visit live website

An energy-sector AI platform presented through the Gain Energy website under the Upstrima product name. It brings specialized engineering agents, data processing, automated workflows and domain expertise together to support oil and gas teams.

KEY FEATURES

- Marketplace of specialized oil and gas AI agents.
- Automated engineering workflows and reporting use cases.
- Data processing for drilling and operational analysis.
- Published connections to SQL data, WITSML and document platforms.
- Expert support and custom agent development options.

TECHNOLOGY EVIDENCE

OBSERVED ON PUBLIC WEBSITE

JavaScript-rendered single-page website with a main JS bundle under /static/js/.

PUBLISHER-DESCRIBED INTEGRATIONS

SQL data sources, WITSML, Google Drive, OneDrive and SharePoint. These describe the product's advertised connections, not a verified backend implementation.

INFERENCE / UNVERIFIED

The asset pattern is consistent with a React-style build, but React is not confirmed. AI models, backend language, database, orchestration and cloud provider remain unknown.

TEAM CONTRIBUTION / TO CONFIRM

Our team delivered [confirmed marketing site, platform modules or integrations] for Gain Energy / Upstrima. We implemented [specific engineering workflows or interface work] with [actual technologies] and provided [confirmed testing or deployment support].

Fill-in wording only. Replace brackets with the work your team actually performed.

Sources: Gain Energy / Upstrima website Features section Use-case section

Scope review: State whether you built the marketing site, the Upstrima application, selected agents or data connectors. Identify actual AI models, data formats, visualization tools and backend technologies.

01 Gain Energy and Upstrima product introduction

02 AI agent marketplace feature presentation

03 Engineering AI agent use cases

Public website captures. Feature illustrations are not independently tested product screens.

05 / PROJECT PROFILE

GoWabi

Marketplace / Booking / Ecommerce

Visit live website

A beauty and wellness marketplace that helps customers discover providers, compare treatments and purchase service offers. It organizes spa, salon and clinic experiences through category browsing, venue profiles, customer reviews and location-based discovery.

KEY FEATURES

- Search and browse services across beauty and wellness categories.
- Filtered listings with locations, prices and promotional offers.
- Venue pages with galleries, ratings and map locations.
- Service selection and booking or voucher-purchase entry points.
- Multilingual navigation, currency options and mobile app links.

TECHNOLOGY EVIDENCE

OBSERVED INTEGRATIONS

Slick Carousel 1.9, Google Tag Manager, Google Analytics, AppsFlyer web scripts and Google Maps displayed on venue pages.

LIKELY; NOT CONFIRMED

Ruby on Rails-style web application: fingerprinted application assets and Rails-style CSRF meta conventions. This is an inference, not proof of its backend.

UNVERIFIED

Database, backend framework/version, hosting, payment gateway and mobile app framework. Do not substitute a preferred stack for the real one.

TEAM CONTRIBUTION / TO CONFIRM

Our team contributed [confirmed modules or improvements] to GoWabi. We worked on [specific discovery, provider, booking or commerce functions] using [actual technologies], with responsibility for [confirmed frontend, backend, QA or maintenance scope].

Fill-in wording only. Replace brackets with the work your team actually performed.

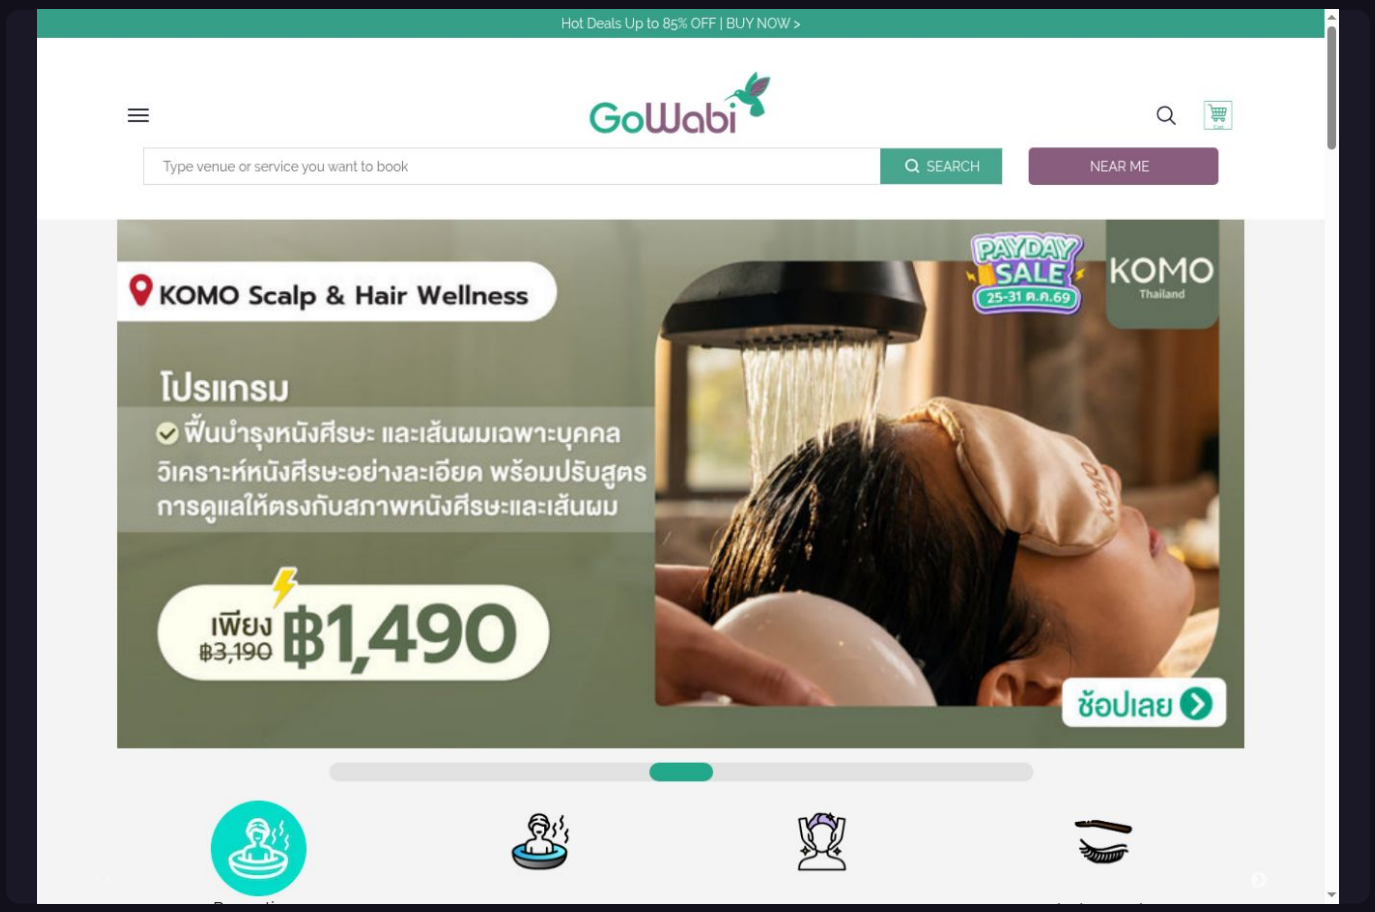

Sources: GoWabi homepage · Spa and massage listings · Example venue profile

Scope review: Identify the exact website or app modules, time period and delivery role. The current site credits the GoWabi Team; clarify whether your contribution was direct, subcontracted or part of that team.

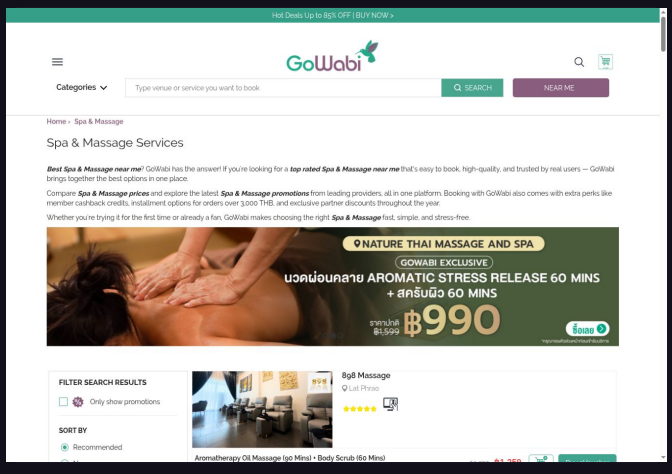

05 / SCREENSHOT GALLERY

GoWabi

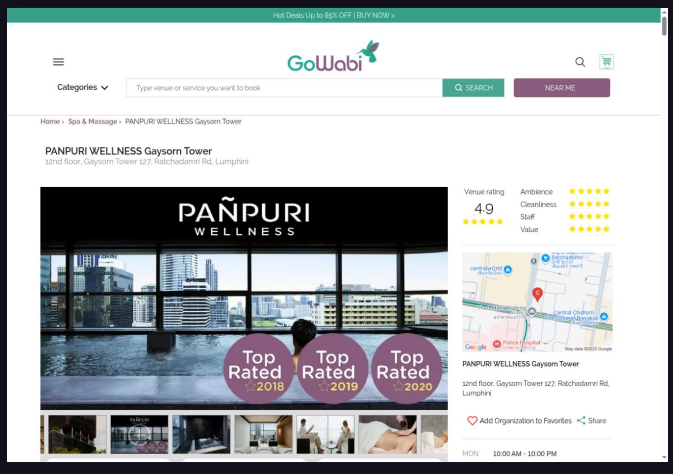

Three real public-source images

01 Marketplace homepage and service search

02 Spa and massage category with filtering

03 Venue profile, gallery, ratings and location

Public website captures. Feature illustrations are not independently tested product screens.

06 / PROJECT PROFILE

Daniela Diamonds

Shopify / Luxury ecommerce

Visit live website

A jewelry ecommerce experience that combines luxury product presentation with guided ring selection. Customers can browse engagement rings and fine jewelry, filter by design preferences, explore ring details and move toward a personalized diamond-and-setting combination.

KEY FEATURES

- Jewelry catalog covering engagement rings, wedding bands and more.
- Ring filters for style, stone shape, metal and price.
- Product imagery and configuration for metal, size and stone selection.
- Cart, customer-account and wishlist entry points.
- Appointment booking, custom-order links and product education.

TECHNOLOGY EVIDENCE

CONFIRMED ON PUBLIC STOREFRONT

Shopify storefront, Shopify-hosted theme assets and app routes for the ring builder and jewelry catalog.

OBSERVED FRONTEND ASSETS

jQuery 3.7.1, Swiper 11 and Judge.me extension scripts.

UNVERIFIED

Ring-builder backend, inventory supplier/API, custom app language and your team's theme/app ownership. Shopify Liquid is plausible for the theme but was not source-verified.

TEAM CONTRIBUTION / TO CONFIRM

Our team [developed/customized/improved] [confirmed Shopify theme or app components] for Daniela Diamonds. We handled [specific catalog, filtering, configuration or integration work] using [actual technologies] and supported [confirmed QA or launch responsibilities].

Fill-in wording only. Replace brackets with the work your team actually performed.

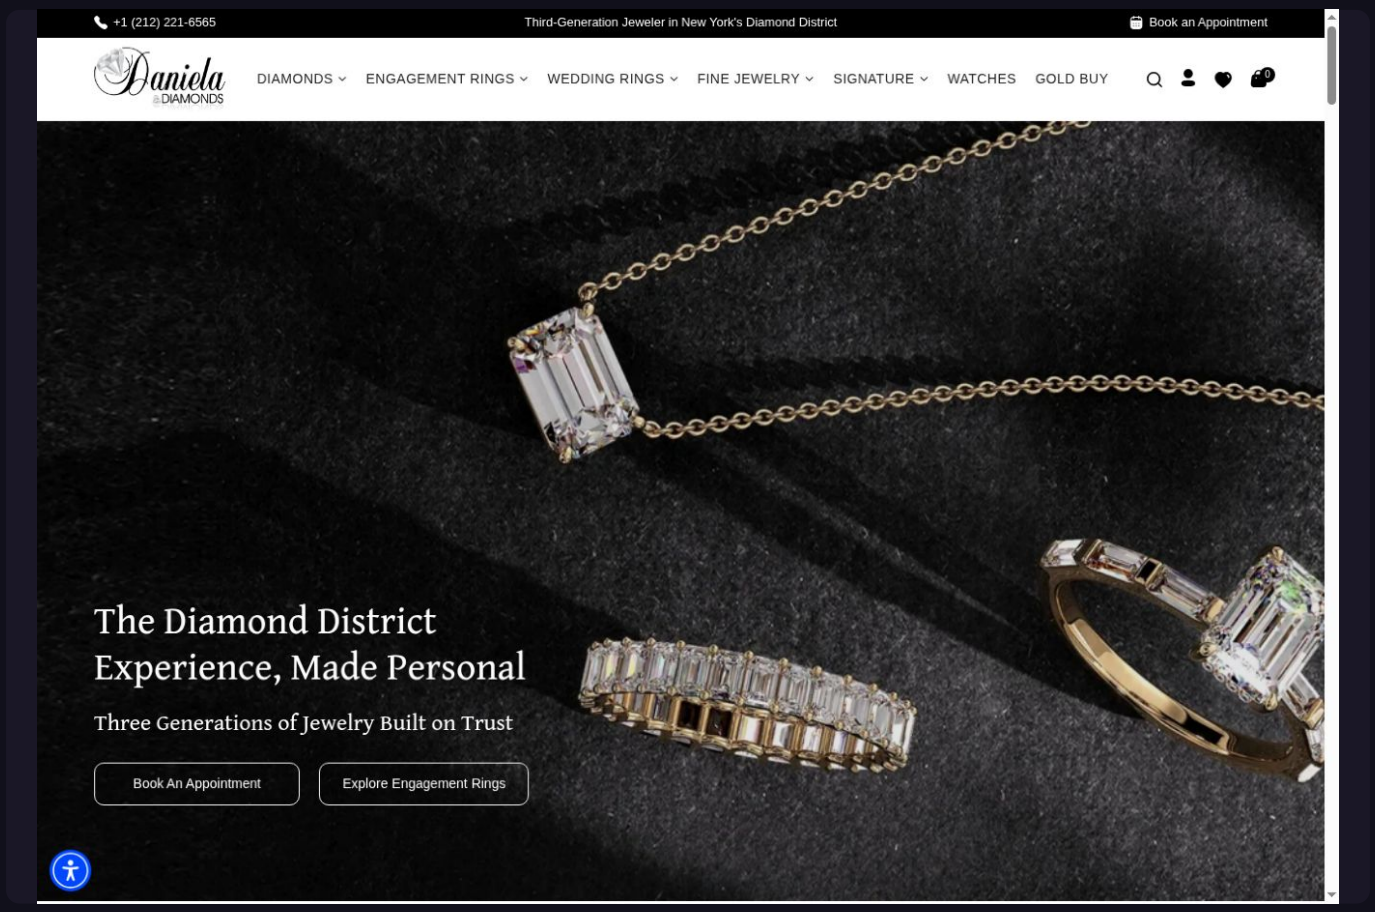

Sources: Storefront and credits · Ring-builder catalog · Example configurable ring

Scope review: The live footer credits Belgium Webnet Inc. Confirm your relationship to that delivery, your work dates and the exact components you developed before publishing a broad authorship claim.

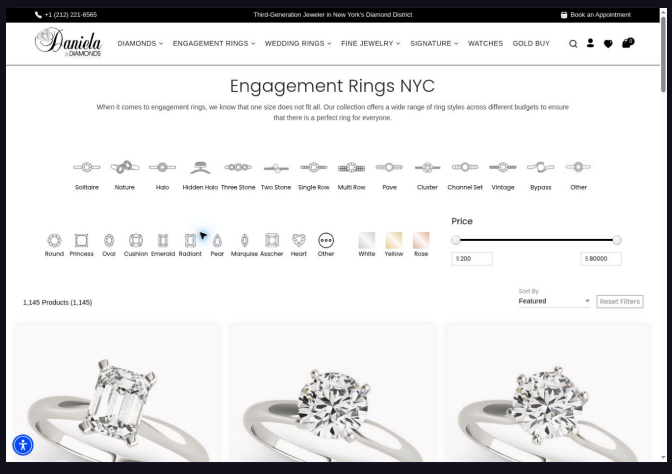

06 / SCREENSHOT GALLERY

Daniela Diamonds

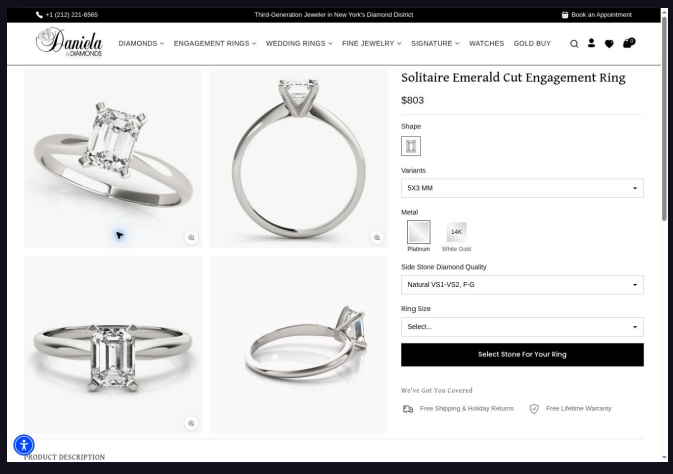

Three real public-source images

01 Luxury storefront homepage

02 Ring catalog and visual filters

03 Product gallery and ring configuration

Public website captures. Feature illustrations are not independently tested product screens.

Before publishing

Turn this researched draft into an accurate account of your team's work.

01 Confirm the delivery scope

For each project, identify exactly what your team built, improved or integrated. Distinguish full-product work from selected modules, maintenance or subcontracted delivery.

02 Provide the real stack

Confirm the mobile/game framework, backend, database, hosting and integrations from project records. A public website stack does not prove the technology behind an authenticated app.

03 Clarify the credited delivery relationships

Daniela Diamonds currently credits Belgium Webnet Inc.; GoWabi credits its own team. Explain your role and engagement dates so the wording reflects your actual contribution.

04 Add evidence-backed results

If available, supply launch dates, measured performance improvements or client-approved outcomes. No user counts, revenue, conversion gains or cost savings have been invented.

05 Match screenshots to your engagement

These captures reflect the products as reviewed on October 27, 2026. Confirm that the screens represent your work, especially if the product has changed since handover.

INCLUDED IN THE CONTENT PACK

Editable portfolio text · 18 image files · structured project data · source notes · a team-contribution worksheet
